RESULTS OF SURVEY ON STATE OWNED LAND ADJACENT TO THE ROCKY FLATS
ENVIRONMENTAL TECHNOLOGY SITE (THE SITE) - DCS-049-05

Dear Mr. Routten:

In follow up to our conversation on September 9th, I am writing this letter to give you the background and results of our recent investigation of potential radiological contamination on State owned land adjacent to the Site owned by the United States Department of Energy.

Background

The Department of Energy contracted with Bechtel-Nevada to conduct a full boundary-to-boundary aerial radiological survey of the Site. The purpose of this survey was to determine if areas of significant plutonium and/or americium existed that were not known. This flyover was conducted June 12-15, 2005 and included some lands immediately adjacent to the Site. The draft report of findings was shared with us in August. Based on that draft, one location was identified on land immediately south of the West Access Road into the Site from Highway 93. This location is on land managed by the State Land Board and is in undisturbed land just northeast of the abandoned clay pit.

Action and Results

Based on this preliminary/draft information from Bechtel-Nevada, Kaiser-Hill Company, LLC, on behalf of the Department of Energy requested and received permission from the State Land Board to conduct testing on your lands and determine if the location identified by the aerial survey was an actual area of contamination or a false positive in the data set. We have completed the investigation and determined that there is no elevated level of radionuclides on the state lands.

If you have any further questions, please do not hesitate to contact me at 303-966-9877.
